Water is no longer an isolated and standard element with the only playful function of cooling us down in summer, but it has become one more decorative element, capable of generating a totally different garden experience.

The design of the pools has changed over time. Today we put the same care as to decorating a living room or kitchen because it is a really special space. Today we integrate pools into gardens, and we coordinate their design with architecture and general aesthetics. In addition, the pool is a living space, visited by our children, family, and friends.
